 AB - J09030137 A thermal transfer recording material has a base film composed of a void-contg. polyolefin type resin film and an image-receiving layer on the surface of the film, and at least the portion of the film in contact with the receiving layer has a wet tension of at least 40 dyne/cm.
 - Pref. the film contains fine particles of an organic crosslinking polymer as a void-forming agent. Pref. the film has (B) a surface-glossiness on at least one side of (A) a substrate layer in such a way that (B) is in contact with the receiving layer. Pref. (A) contains 1.6-40 pts. wt. w.r.t. 100 pts. wt. of the polyolefin type resin of the fine particles of the crosslinking polymer having an average particle size of 0.1-7.0 μ m. Pref. (B) contains 0.05-1.5 pts. wt. w.r.t. 100 pts. wt. of the polyolefin resin of the fine particles of the crosslinkable polymer and/or inorganic fine particles having an average particle size of 0.1-7.0 μ m.
 - ADVANTAGE - The material has high adhesion between the polyolefin type resin film and the image-receiving layer and good glossiness, permits high density printing without missing of dots and achieves high uniformity of images.
 - (Dwg.0/0)
 IW - THERMAL TRANSFER RECORD MATERIAL GLOSS COMPRISE VOID CONTAIN POLYOLEFIN RESIN BASE FILM IMAGE RECEIVE SURFACE LAYER ACHIEVE HIGH DENSITY PRINT HIGH UNIFORM IMAGE
 IKW - THERMAL TRANSFER RECORD MATERIAL GLOSS COMPRISE VOID CONTAIN POLYOLEFIN RESIN BASE FILM IMAGE RECEIVE SURFACE LAYER ACHIEVE HIGH DENSITY PRINT HIGH UNIFORM IMAGE
